

# T-Lights are for light rail.

LRVs are another mode of transport that uses our corridor similar to cars and buses. They have their own traffic lights called T-lights.

T-lights are only for LRVs. Road rules for other vehicles have not changed. Please obey all traffic signals and signs.

## New signs along the light rail route.

### LRVs Only

Only LRVs are permitted to travel on the tracks.

### Cyclists exercise caution

This sign alerts cyclists of light rail tracks ahead. Rail tracks can be a fall hazard so practice caution.

### Traffic light sequence varies

Light rail vehicles have priority at traffic lights. Traffic light sequencing will vary for motorists, pedestrians and cyclists. Be alert and obey the signals.

## Other things you should know about light rail.

LRVs take longer to come to a stop than road vehicles and cannot swerve to avoid contact.

LRVs are wider than the tracks. Stay well clear as they approach and leave them plenty of room.

The tracks are smooth and in wet weather the rail surface at crossings may be slippery.

LRVs have priority as they approach intersections and crossings. Please be alert and obey all traffic signals and signs. Remember: pedestrians should always give way to moving Light Rail Vehicles.

The overhead wire is LIVE and carries 750 volts of power. Keep away!

Before commencing work in and around the light rail corridor, contact CMET at [permits@cmet.com.au](mailto:permits@cmet.com.au)

In the event of an emergency, dial 000.

Follow the rules and we all stay safe.

# Are you Rail Safe?

Safety information for pedestrians, cyclists, and drivers.

# Safety for pedestrians.

Always cross the light rail tracks at designated crossings!

Always look both ways before crossing at intersections and crossings. Light Rail Vehicles (LRVs) can approach from either direction and at any time.

Wait for the green walk signal before crossing the tracks at signalised crossings.

Pay attention and stay alert around light rail – LRVs move quickly and quietly. Earphones and other distractions like reading, texting, or taking photos can put you at risk.

Take care not to let the wheels of prams or wheelchairs get stuck in the track.

Remember: pedestrians should always give way to moving LRVs.

# Safety for cyclists.

Always keep a safe distance from LRVs!

Rail tracks can be a fall hazard. Ride directly across the tracks at a right angle to avoid your wheels getting stuck in the groove.

Do not ride along the rail track.

Always cross the tracks at designated crossings.

Never cross in front of a moving LRV and avoid braking on the rail tracks.

# Safety for drivers.

It is prohibited to drive along the tracks!

Road rules stay the same. Always obey traffic lights and road signs.

Never queue across the tracks. Wait until the path ahead is clear before driving across the tracks.

Truck drivers should ensure their vehicle load does not come close to the overhead wire when entering or crossing an intersection.

Perform U-turns only where U-turns are signed as permitted.

Exercise patience when waiting at traffic lights as delays may be experienced when an LRV is approaching. Consider allowing extra travel time during in peak periods.
